

David Marr

25 Years Scaling Modern Software, Global Teams & AI Integration

Boston, MA | +14152486633 | dave.marr@gmail.com | marr.github.io | [marr](#) | [davidmarr](#) | [dmarr](#)

Summary

Engineering leader with 25 years of experience building production software in startup and small enterprise environments. Over the past few years, building better agentic coding and delivery workflows have been my primary focus.

Experience

June 2022 – Mar 2026 **Principal UI Engineer / Engineering Manager**, Context Labs – Boston, MA

Led a distributed UI/UX engineering organization to deliver a multi-tenant, production-grade analytics platform using Nuxt and Vue. Combined hands-on frontend development with people management, OKR-driven delivery, and platform-thinking to reduce time-to-market and improve product quality.

- Managed and grew a team of UI/UX engineers across three continents; introduced OKRs and regular reviews to increase velocity, accountability, and MTTR by 50%.
- Fostered AI tool adoption across the engineering organization, adding MCP capabilities to our web framework, coaching teams on modern software development strategies.
- Designed and launched Decarbonization-as-a-Service (DaaS) for major global energy companies, allowing for NextGen energy products to be sold as premium offerings.
- Built a production BFF platform integrating GraphQL and Java backed services, multi-tenancy, SSO authentication, RBAC, and internationalization using Nuxt and Nitro.
- Developed a shared UI component library with data visualizations using Vega Lite, interactive maps with MapBox, and accessible controls (TypeScript/Vue) to ensure performance, stability, and consistent UX across suite of customer-facing products.

Feb 2020 – Feb 2022 **Lead Engineer**, Filtered.ai – Boston, MA

Engineered the scalable SaaS platform for employers managing high-volume technical hiring processes. Automated grading and fraud detection for job applications.

- Directed development of recruitment workflows including interview scheduling, candidate pipelines, and assessment portals using React, TypeScript, and Node.js.
- Implemented AI-driven grading, automated feedback, and fraud-detection systems to scale technical evaluations using Connect (WebRTC) and Mechanical Turk from AWS.
- Shipped features informed by funnel analytics and product metrics that identified drop-offs, drastically improving completion rates and time-to-hire conversion metrics.

Apr 2018 – Dec 2019 **Staff Software Engineer**, Turo – California & Massachusetts

Implemented and supported customer-facing features focusing on engagement and revenue for high-performing hosts.

- Owned and evolved trip management tools with dynamic pricing controls, improving host experience and utilization.
- Helped to implement the 'All-star' program initiative to recognize and incentivize top hosts, contributing to retention and higher-quality listings.
- Partnered with analytics to measure feature impact and iterate based on user behavior and revenue metrics.

- Jan 2016 – May 2018 **Senior Software Architect**, OneMarket / Westfield Labs – San Francisco, CA
Architected physical and online payment products, producing £2m per-month of income. Led development on customer management tools using JavaScript and React.
- Developed smart parking solutions leveraging facial recognition, subscription billing, and automated gates to streamline access and payments using React and Stripe APIs.
 - Built indoor mapping, directory kiosks, and wayfinding systems to enhance navigation in complex retail environments using Mapbox, Node.js and C.
 - Integrated edge devices using Google Cloud Platform (GCP) for reliable, low-latency user interactions and centralized identity management with PostgreSQL and ORY Hydra.
- July 2013 – Dec 2015 **Senior Systems Engineer**, Tilt.com – San Francisco, CA
Optimized core user flows and backend systems to increase conversion and streamline operations during high-growth phases.
- Guided new and existing users through a monetary contributions flow leading to a 15% lift in conversions for first-party user signups.
 - Engineered early React SSR solutions using Perl and JavaScript.
- Jan 2009 – Mar 2010 **Design Technologist**, Frog Design – San Francisco/Orlando/Austin
Engineered digital and physical technical innovations including:
- MagicBand wristband at Disney World onsite in Orlando, FL.
 - Cellular television at Qualcomm campus in Austin, TX.
 - Smartphone UI for AT&T/Facebook prototype in San Francisco, CA.
- 2000-2013 **Previous Leadership & Technical Roles**, Various – Massachusetts & California
Industrial automation web interfaces and dashboards (GE Fanuc / Intellution); enterprise web integrations (SoftArtisans); user-facing features and a Webby-recognized career advice site (Monster.com); scalable frontend architecture for high-traffic Yahoo properties; design-to-production prototyping (Frog Design); co-founder/CTO for an early social product (Secret Feature); publishing and ad-tech at Say Media.

Education

- Sept 1996 – May 2000 **University of New Hampshire**, BS – Durham, NH
Focus on Management of Information Systems (MIS)
- Dean's list.

Skills

Languages/Frameworks/Web: TypeScript, JavaScript, Python, Go, React, Vue, HTML, CSS, Tailwind, Nuxt, Tanstack Start, Vega Lite, Mapbox, D3, Zod, React Hook Form, Vee-Validate, WebGL, WebGPU, WebRTC

AI Tools/Infrastructure: Kubernetes, AWS, PostgreSQL, Docker, Git, MongoDB, Bash, Trino, ArcadeDB, Vite, Vitest, Vercel AI SDK, Pi, Cursor, Opencode, Cloudflare Workers, Cloudflare Durable Objects, Agent Skills, Turborepo, Lerna/NX
