

# David Marr

Principal Software Engineer — Distributed Analytics & Platform

📍 Boston, MA • ✉ dave.marr@gmail.com • 🌐 marr.github.io • 🐙 marr • 🔗 davidmarr • ✖ dmarr

---

## Summary

Principal engineer who designs and operates large-scale analytics platforms — reliable query access, multi-tenant data services, and platform primitives that teams can build on without re-solving the same problems.

Twenty-five years shipping production systems on PostgreSQL, AWS, Python, and distributed query infrastructure (Trino). I partner across engineering and product, guide efforts from design through delivery, and mentor engineers through design reviews and production learnings.

---

## Experience

**Context Labs**, Principal Software Engineer / Engineering Lead (Platform) – Cambridge, MA June 2022 – Mar 2026

Led platform engineering for a multi-tenant analytics product serving distributed teams — query access, data services, reliability, and reusable capabilities across reporting and operational use cases.

- Built production data-service layer in Node.js/TypeScript (GraphQL) integrating with Java APIs — multi-tenancy, access control, and localization as the stable query and integration surface for analytics workloads.
- Partnered with product, analytics, and engineering stakeholders to shape data models and APIs; introduced platform primitives that reduced repeated plumbing across teams.
- Improved platform reliability and observability — operational reviews and engineering standards cut incident recovery time by 50%.
- Guided complex efforts from early design through delivery across a distributed engineering organization on three continents.
- Mentored engineers through code review, design discussion, and production incident learnings.

Skills used: Python, Node.js, TypeScript, PostgreSQL, Trino, GraphQL, Docker, Kubernetes

**Filtered.ai**, Lead Engineer – Boston, MA

Feb 2020 – Feb 2022

Lead engineer building AWS-backed data pipelines and assessment platform services for enterprise recruiting teams — ingestion, validation, scoring, and reporting at production scale.

- Built ingestion, scheduling, grading, and workflow services on AWS and PostgreSQL with reliability requirements suitable for enterprise customers.
- Integrated model scoring and human-in-the-loop validation into pipelines with data quality checks and operational monitoring.
- Collaborated with product and data science on deployment, query and data-model design, and ongoing production improvements.

Skills used: Python, AWS, PostgreSQL, Node.js, SQL

**Turo**, Staff Software Engineer – Cambridge, MA

Apr 2018 – Dec 2019

Owned backend services for trip management and dynamic pricing — availability rules, rate logic, and transactional behavior under production load.

- Maintained pricing and host-recognition systems where product rules depended on dependable service performance and reporting data.
- Partnered with product and operations to translate requirements into shippable backend behavior with clear operational expectations.

Skills used: PostgreSQL, SQL, TypeScript, JavaScript

**OneMarket / Westfield Labs**, Senior Software Architect – San Francisco, CA Jan 2016 – May 2018

Architected payment and venue platform services integrating hardware, billing, and usage data through PostgreSQL-backed APIs — reliability and reporting mattered for revenue and operations.

- Designed service and data flows across payment, billing, and venue systems — ~\$2.7m in monthly recurring revenue depended on dependable platform behavior.
- Delivered systems averaging 60,000+ monthly sessions across 4 flagship venues with operational metrics for stakeholder reporting.

Skills used: PostgreSQL, SQL, Node.js, C, Stripe

**Tilt.com**, Senior Systems Engineer – San Francisco, CA July 2013 – Dec 2015

- Built and operated Perl/Dancer backend services with PostgreSQL for a high-traffic payments product — request handling, data modeling, and iterative performance improvements.
- Implemented contribution-flow changes yielding 15% lift in signups through simpler service paths and data handling.

Skills used: Perl, PostgreSQL, SQL, JavaScript

**Various**, Previous Leadership & Technical Roles – Massachusetts & California 2000-2013

- Scaled architecture and integrations for high-traffic Yahoo properties; enterprise web integrations (SoftArtisans).
- Publishing and ad-tech platform work at Say Media — audience data, campaign delivery, and reporting at scale.
- Industrial automation backends and dashboards (GE Fanuc / Intellution); co-founded early social product (Secret Feature).

Skills used: SQL Server, MySQL, PostgreSQL, Node.js, .NET, PHP

---

## Education

---

**University of New Hampshire**, BS in Business Administration – Durham, NH

Sept 1996 – May 2000

Focus on Management of Information Systems (MIS)

---

## Skills

---

**Distributed Analytics & Data:** Trino, PostgreSQL, SQL, GraphQL, Python, data modeling, query access patterns

**Platform & Cloud:** AWS, Docker, Kubernetes, Node.js, TypeScript, Bash, Git, MongoDB

**Reliability & Operations:** Observability, incident response, multi-tenancy, service boundaries, production debugging, mentoring
